

What's Killing Supply Chain Sustainability?

**Supply chains ran like clockwork
until someone asked for sustainability data...**

One Random Tuesday Morning

CSO

Compliance Head

Heads up! We need supplier level emissions data for CSRD, California Climate Laws, and CSDDD.

Sustainability Team

Scope 3 across hundreds of suppliers ...we barely manage scope 1 & 2 on time!

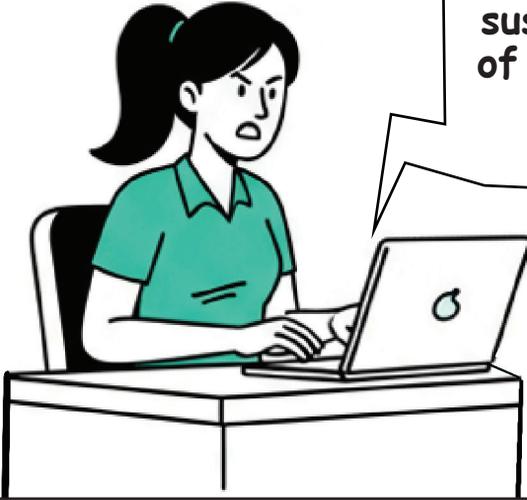

Legal Team

Non-compliance isn't an option!!

Sustainability Team

Dear Supply Chain team, we need sustainability data of all our suppliers ASAP!!

Legal is breathing down our necks..

We already chase suppliers for delivery, now for emission?

Sustainability Manager

Supply Chain Head

You know them best, they'll respond faster if it comes from you..

Supply Chain Manager

Supplier 1

So many surveys..Do you expect us to fill these while running our business?

Supplier 2

What's scope 3, category 1?

Will I lose business if I don't share this data?

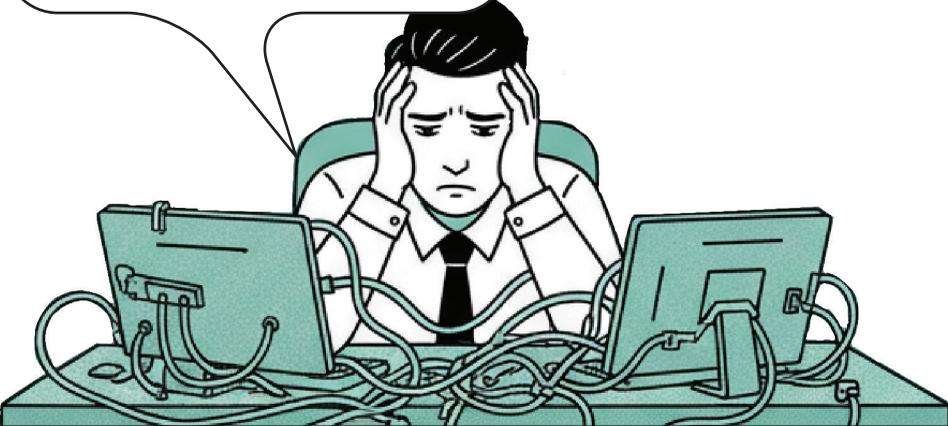

Different formats..How many times do we have to repeat the same data?

Supplier 3

Supply Chain Manager

Most ignore us and others send messy data

REGULATIONS

But regulators don't accept "suppliers didn't respond"

Compliance Team

Maybe hire 100
interns to call
each supplier

or tell them to stop
making products and
only fill forms

Is there any solution to this back and forth?...

This can't just be more surveys. There has to be a smarter way.

Let's do some research.

EUREKA!!!
I may have
found JUST
THE THING!

Sustainability Team

With Sprih, I don't chase
suppliers; AI already
fetched their data for me.

The AI does the heavy lifting:
processes raw data from any format, applies
supplier specific emission factors, pre-fills surveys
for suppliers to confirm.

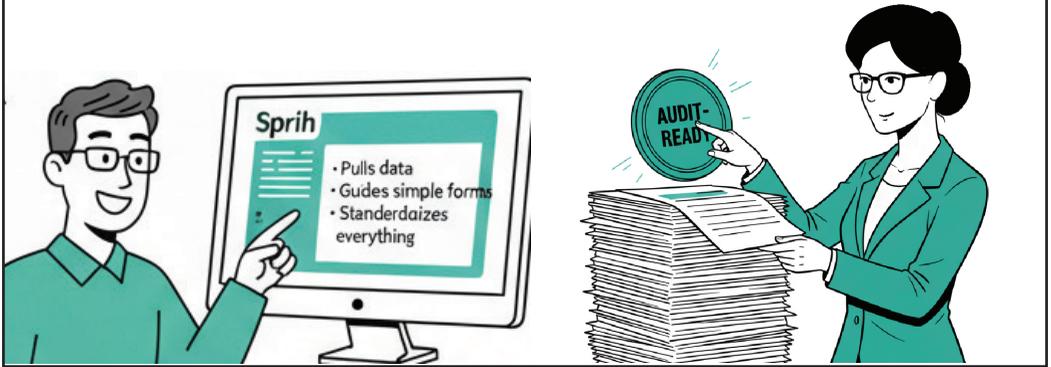

Supplier

Finally! No more
endless survey
forms. I just
approve
pre-fetched
data and move
on.

**Sprih makes every data point traceable.
No loopholes. No excuses.**

**Now we focus on data driven
insights, not spreadsheets**

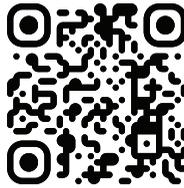

Sustainability Team

With Sprih's AI and the world's largest climate database, I'm driving impact with data-driven decisions and a bold sustainability strategy.
